

Adapting Planner Pages to Match Existing Pages

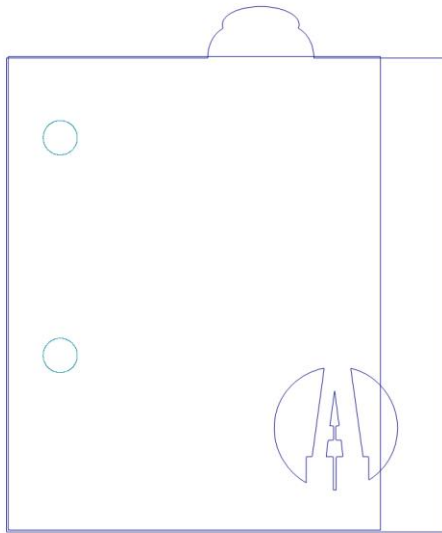

If you'd like to adapt the Planner Pages Cutting Collection to fit a planner you already own, you can do so easily with just a few steps.

1. Measure the size of an existing planner page. Measure the distance of the entire page, the distance from the top of the page to the top hole, the distance between holes, and the distance from the left side to the holes.

You are basically recreating the existing planner page on your screen. After I have all the measurements I like to cut out a page to make sure I have all the measurements correct.

2. Use the template you created to adapt the planner pages to fit your binder or existing planner by duplicating the template and overlaying your template with the cutting collection page. Delete the holes on the cutting collection page. Resize the cutting collection page to match the size of the template.

3. Next delete the template, leaving behind the holes. They will be perfectly lined up on the cutting collection page.
